New Ransomware Trends in 2023

Ransomware keeps making headlines. In a quest for profits, attackers target all types of organizations, from healthcare and educational institutions to service providers and industrial enterprises, affecting almost every aspect of our lives. In 2022, Kaspersky solutions detected over 74.2M attempted ransomware attacks which was 20% more than in 2021 (61.7M). Although early 2023 saw a slight decline in the number of ransomware attacks, they were more sophisticated and better targeted
